

ENVIRONMENTAL POLICY

Electro-tech Plus exceeds in designing, producing and servicing equipment for the Defence, Oil & Gas and utility related industries. We are committed to the management of the potential and actual environmental impacts resulting from our activities; our aim is for continuous improvement and prevention of pollution in those activities.

We will develop and improve environmentally sound processes and techniques, using the most up to date products and services within all aspects of our business paying particular attention to;

- Reduction of waste materials sent to landfill
- Reduction of power consumption
- Reduction of the use of natural resources
- Control of by-products being released into the environment

We will allocate sufficient resources to implement our Environmental Management System to cover all aspects of our business, including procurement, manufacturing, development, testing and transport of our products and services. The system will co-ordinate, evaluate and continually improve our environmental performance through a programme of targets, internal audits and reviews

We will encourage employees through communication and training programmes to be committed and involved in our environmental goals and targets

The company is committed to comply with all applicable legal requirements and approved codes of practices, and where possible exceed these standards

This policy will be communicated to all personnel through induction training, on-going Quality, Health & Safety and Environmental awareness training, staff briefings, the company intranet and notice boards.

This company policy has the full support and commitment of the Directors and will be regularly reviewed for its continuing suitability during planned management review meetings.

Lionel Gapper (Director) 17/09/18
